Defense Guild Consortium
of
Data
in conduct unimpeachable

Data is a guild focused on discovery.
Data guild members seek clear answers to important questions from vast sets of unstructured mystery.

In Your Last Job

Data Engineers and Data Scientists may have been separated from each other, and both from product customers and users.

At The Defense Digital Service

Data Engineers and Data Scientists work together to unlock data trapped in legacy systems and transform it into actionable analytics.They engage directly with customers and the users of data products to understand requirements, and combine their skills in infrastructure, automation, and statistics to deliver solutions.

Infrastructure

Constructing data architectures and pipelines to support known and emergent use cases, at scale and at speed.

Machine Learning

Using data, statistics, and algorithms to understand the present and make predictions about the future.

Analysis & Reporting

Transforming raw data into key metrics, charts, maps, and reports to help people make better decisions.
