Defense Guild Consortium

of

Engineering

in conduct unimpeachable

Engineering is a guild focused on the technical.
The congress of technical expertise and programming savvy. Engineers specialize in complex industrial, computing, and mechanical endeavors from start to finish.

In Your Last Job

Staff may have rarely interacted with an engineer, the Engineering teams often consulted randomly in "waterfall" project management, further separated into front-end, back-end, and database specializations.

At The Defense Digital Service

Engineers are visible pillars in our project teams. Whether they're coding, hacking, or physically engineering hardware, DDS Engineers are patient, collaborative leaders in a project. Engineers are often responsible for **compliance**, **function**, and **quality control**, our work. Expect an engineer to suggest new ways technology could be utilized that you may not have previously considered.

Software

Bringing the principles of computer science to software engineering, building new systems and repairing the old.

Coding

The creation and discovery of complex systems by communicating with computers in their own languages.

Hacking

Discovering exploits and possible avenues of malfeasance by employing the tools of those who would do us harm, and preventing it.
